evaluation script

```
start top script
load scripted model
for each audio file
    run inference
    save inference time, hypothesis
post process WER,RTF,CPU,Memory
```

**Raspberry Pi**

+ colab
python

prepare script

```
load pre-trained model
    {Fairseq, Huggingface}
fix any errors
convert model to scriptmodule
apply mobile optimizations
save scriptmodule
```
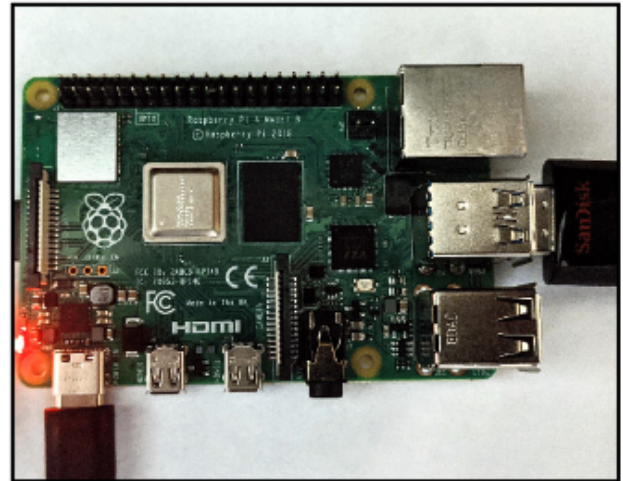

util script

```
download  librispeech dataset
generate MFCC features
save audio and features
```

Google colab instance

evaluation script

```
start top script
load scripted model
for each audio file
    run inference
    save inference time, hypothesis
post process WER,RTF,CPU,Memory
```
